

Water mains flushing programme

We will be conducting a mains flushing programme as part of our regular network maintenance. This is scheduled on Wednesday 10th and Thursday 11th August 2022. Flushing consists of opening fire hydrants at intervals allowing water to scour the internal walls of the pipe and removing sediment. Flushing may cause a brief period of dirty water, and it is recommended that you:

- Run outside taps until the water runs clear, approximately five minutes.
- Avoid running inside taps especially hot water as this can allow dirty water to enter the hot water cylinder.
- Flushing outside taps assists in clearing the entire water network.

We apologise for any inconvenience the flushing programme may cause.

If you have any queries or concerns, please call our team on 07 873 4000.
